

## CBD

Available in conventional and certified organic

**Characterization** Crude oil, isolate, distillate

**Facilities** HACCP, GMP, EU-GMP\*, Pharma Grade\*

\* In progress

**C**annabidiol (CBD) has been celebrated for far reaching medical applications. In addition, CBD is non psychoactive making it a safe and effective option for patients who may be concerned about the mind-altering effects of other cannabinoids such as THC.

**Applications:** CBD oils have been shown to offer a range of health applications in dealing with anxiety, depression, inflammation, acne, sleep disorders, heart disease and pain management.

### The Blue Sky Advantage

Blue Sky has developed a unique system to address the many challenges of broad-acre farming for CBD. Our state-of-the-art facility can process 4,500 tonnes per year of hemp biomass - reducing the volume of material by 80-90% for more efficient transport while increasing CBD potency by 3-5x resulting in more efficient extraction and lower costs.

In keeping with our zero waste philosophy, we turn the 'waste' biomass into other industrial and feed products.

**In addition,** our end-to-end processing facilities mean that we have oversight and quality control on the entire process from seed selection to extraction. Blue Sky is GMP certified, and is applying for EU-GMP certification - the most rigorous standard for manufacturers of medical products.

**The result?** Lower transportation costs, higher CBD potency, exceptional quality guaranteed, and competitive prices.

Available in **conventional** and **certified organic**

*A better world, fuelled by hemp*
